Made in Germany

# Product-Information

## The Problem:

Leather is a natural product and therefore it has a natural ageing process. This ageing process is accelerated by environmental influences such as rain, sun and dirt as well as by use /stress exposure. This results in drying-out, tears and fading. It negatively impacts the quality, functionality and value of leather clothing.

## The Solution:

# LEATHER BALM

transparent

### With jojoba oils and bees wax

Jojoba oil is an exclusive and expensive top quality care oil that is often used in very expensive cosmetics. It is very moisturising and thus protects against drying out without being greasy.

In addition to its leather care properties bees wax provides natural protection against moisture, dirt and fading caused by UV radiation.

## Product Advantages:

### Intense protection against moisture and ageing

- High-quality nutrients (e.g. jojoba oil) deeply penetrate the leather and help keep it soft, supple and resistant
- Natural bees wax provides long-term protection against moisture on the surface
- It is absorbed quickly and without residue, thus keeping dirt adhesion to a minimum
- Excellent colour restoration without greasy shine, making it suitable for matte leather
- Maintains the breathability of climate membranes (confirmed by certificates)

## Applications:

### For all types of smooth leather and colours (including perforated leather)

## How to apply:

Apply S100 Leather Balm onto cleaned and dry leather sparingly and evenly using a soft sponge. Leave to act for a short time (5-10 min) and wipe off excess leather balm with a soft cloth.

## Tip:

Cleaning the leather beforehand removes dirt and opens its pores. This is the best way to prepare the leather to absorb the nutrients and the moisture protection. To gently clean the leather we recommend the S100 Leather Cleaner or the S100 Technical Fabric & Leather Wash.

The product's liquid content must be two thirds full. Returned consignments must be correctly stamped and proof of purchase (invoice) included.
